

COMPARATIVE BIOSCIENCES, INC.

A TRANSLATIONAL APPROACH TO PRECLINICAL RESEARCH

We offer a complete program of preclinical research services to support a range of toxicology including:

- Acute, Subacute and Chronic Toxicity Studies-IND Enabling
- Discovery and early Toxicology
- Investigative, custom and special Toxicology
- Ocular, Otic and Dermal Toxicology
- Stem Cell Toxicology
- Botulinum Toxicity and Toxicology
- Combination Toxicology and Efficacy Studies
- Surgical Toxicology

To supplement our regular toxicology, we have a variety of special equipment and capabilities:

OCT • MRI • CT Scanning • EKG • PET • ABR • ERG
Angiography • Digital Image Macroscopic Photography
Digital Image Analysis-histology
Confocal Microscopy

Beginning with early assessment of new molecules including single dose, multiple dose, and targeted studies, as well as directed or investigative toxicology, complete IND enabling toxicology programs, and finishing with long term carcinogenicity studies, CBI provides expertise, attention, and care on every study. Our study directors are experienced, communicative, and attentive, and we produce high-quality GLP reports in a very timely fashion. CBI provides expertise, attention, and care on toxicology research including early assessment of new molecules with single dose, multiple dose, and targeted studies; directed or investigative toxicology; and complete IND enabling toxicology programs.
