

Coronavirus Treatment

Studies At CBI.

"Acute respiratory distress syndrome (ARDS) is often fatal and very difficult to treat. Ventilation, fluids, anti-inflammatories, diuretics, antibiotics are used as supportive care for decades."

Preclinical Animal Models of Covid-Ards at CBI.

We at CBI have decades of experience in infectious, sepsis, and inflammatory models, including pulmonary and systemic inflammation.

Our CEO, **Dr. Carol Meschter**, had worked for a number of years at Hoffmann LaRoche and then in biotech in Silicon Valley on Sepsis teams, with various inhibitors such as humanized anti-TAC, anti-TNF fusion proteins, interleukins, PAF antagonists, stem cells and anti-infectives.

For the past year, we at CBI have been developing and implementing rodent models of COVID-ARDS in order to evaluate potential new treatments for our clients.

HOW CAN CBI AND GD3 SUPPORT YOUR PROGRAMS?
