CAROTID ARTERY PROCEDURES.](#)

TREATMENT FOR SEVERE CAROTID STENOSIS INVOLVES
ELIMINATING THE ARTERY BLOCKAGE. THE MOST COMMON
WAY TO DO THAT IS WITH A SURGERY CALLED
"CAROTID ENDARTERECTOMY."

CAROTID ARTERIES

The carotid arteries are large blood vessels on each side of the neck that carry fresh oxygenated blood to the brain and the face. The carotid arteries may become diseased with atherosclerosis, resulting in plaque that narrows the lumen of the artery, causing carotid artery stenosis. Risk factors in humans for carotid artery stenosis include age, smoking, diabetes, high cholesterol, and high blood pressure. **This is a major cause of Stroke.**
